PARTNERSHIP PROPOSAL
for testing of the effectiveness of various agronomic practices
in the conditions of different Ukraine zones

National Scientific Center «Institute for Soil Science and Agrochemistry Research named after O.N. Sokolovsky» (NSC «ISSAR») – a leading research institution in Ukraine, that carries out fundamental and applied research on various issues related to the soil science, agrochemistry, land use and soil conservation.

NSC «ISSAR» has a modern instrument base and qualified staff for carrying out research on a high scientific level, making analyzes of soil and plant samples.

The specialists of NSC «ISSAR» are engaged in development:

- effective environmentally safe fertilizer systems for crops;
- integrated systems of plant protection with priority biological methods for organic farming.

We offer cooperation to institutions and companies to investigate the effectiveness of new fertilizers, biopreparations and agronomic practices in a wide range of crops:

- cereals, grain legumes (peas, soybeans, vetch);
- row crops (sunflower, sugar beet, pumpkin, potatoes etc.);
- vegetable plants;
- fruit trees.

Research may be conducted in the climatic conditions of the Left-Bank Forest-Steppe (Kharkiv region), Northern Steppe (Donetsk region), Polissya (Volyn region), where our Experimental Fields are located.

It is possible to carry out research in organic or conventional farms under rainfed conditions and drip irrigation.

We invite you to mutually beneficial cooperation!

Deputy Director on Scientific Activity
Prof., Doctor of Biological Sciences
Mykola Miroshnychenko
